

CBE and Micro-Credentialing Become Truly Sustainable with *Insights for Canvas Outcomes*

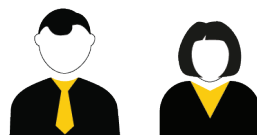

Insights for Canvas Outcomes is a powerful assessment and learning analytics tool that empowers institutions to design, deliver, and evaluate the effectiveness of their Micro-Credentialing efforts and their Competency-Based Education (CBE) programs. With **Insights**, the Canvas LMS and Canvas Credentials become a targeted means of delivery assessments where they are most effective to plan and assess pathways for high quality programs.

Curriculum Map with Attainment Rules for Competencies

AI-Powered Skills and Outcomes Authoring Tools for Faculty

Smart Planning for Signature Assignments for All Competencies

Program and Course Dashboards and Analytics to Track Quality

Empower Faculty.

Faculty can collaborate on effective assignments, shared data, and provide real-time feedback on mastery attainment.

Improve Outcomes.

From Curriculum Maps to Quality Checker, we embed AI to ensure YOU are learning at all times.

Streamline Delivery.

Insights ensures that you are meeting your students mastery goals at the same time as you are meeting your goals for quality.

Richer Modeling and Better Planning Provide Sustainable Success.

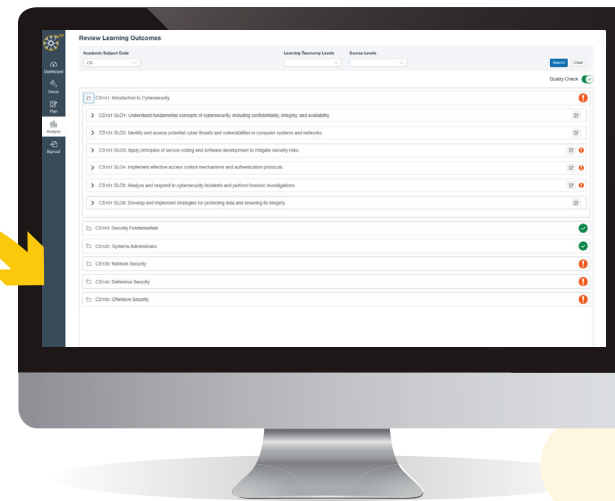

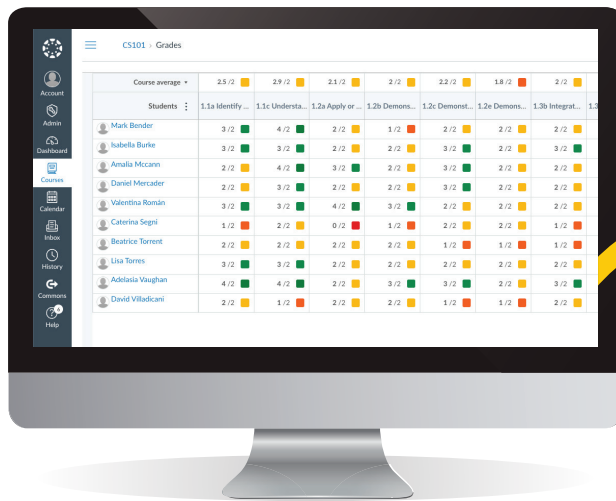

eLumen is a market-leader in Competency-Based Education. From our role on the Technical Advisory Board of 1EdTech CASE and CLR standards, to hosting some of the biggest implementations of CBE in the world, we know how to center both CBE and Micro-Credentialing Pathways efforts around the Canvas LMS. These initiatives require significant effort, and **Insights** was designed from the ground up to scaffold these programs to success.

Insights Brings Transparency to Credentials

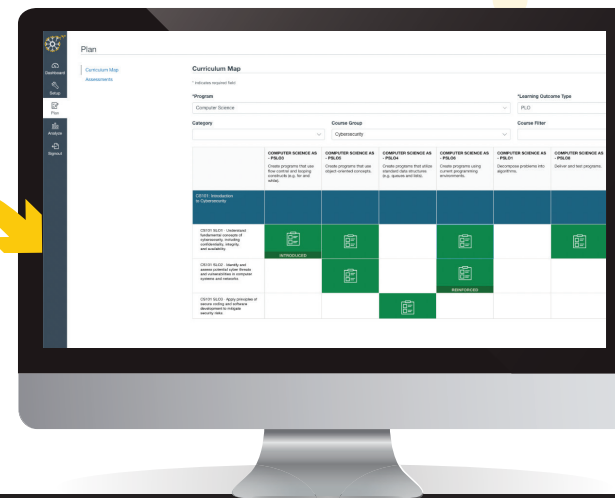

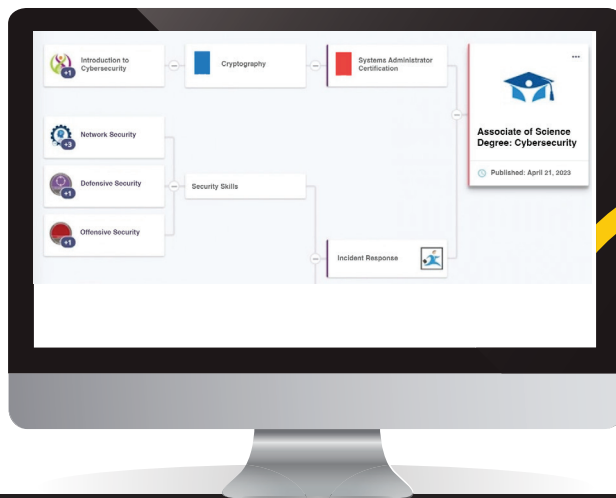

The Learning Mastery Gradebook allows faculty and students to view mastery at the course level.

Insights gives you smart authoring tools to write better skills taxonomies and improved rubrics.

Canvas Credentials provides pathway authoring for stackable micro-credentials.

Our smart Curriculum Map not only creates attainment rules, but also delivers signature assignments so that pathways are intelligently delivered.
