Alexander Nevin	MBAS107-A Healthcare Data Content MBAS113-A Computer Basics in Healthcare	1	2	1	5.88%

Instructor Insight™

AspirEDU, Inc.

Instructor Insight is a software solution that integrates with your LMS and summarizes the behaviors and performance of your instructors. The LMS contains tons of data that help schools to identify both strong and struggling students, right? But the LMS also contains that same amount of data on how the instructor interacts with his or her students. Frequency of course log-in, timeliness of grading and grade distribution can help schools find their best instructors and offer coaching to all instructors.

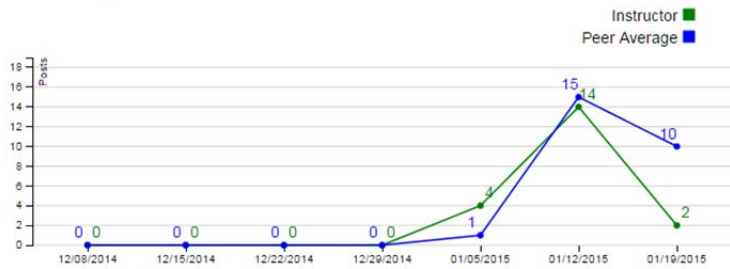

We use data from the LMS to help schools to identify their best instructors.

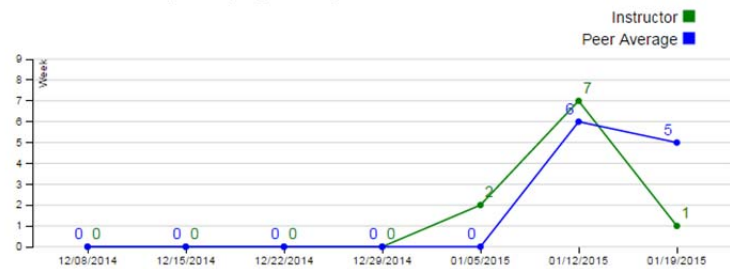

Key Measurements

- Data can be measured against peer performance or school standards
- Frequency of course log-in
- Class size
- Timeliness of grading
- Number of weekly discussion posts
- Instructor discussion posts as a percentage of overall class posts
- Snippets of grading feedback
- Grade distribution
- Indication of the number of at-risk students in each class, when used in conjunction with Dropout Detective™

Total Weekly Instructor Posts

Discussion Participation (days/week)

Instructor Insight takes the great data you already have in your LMS and presents it to you in a way you can use. You'll have the tools to make your instructors – and your classes – more productive.

Important Benefits

- Gives you a real-time window into your online classrooms
- Allows you to see and define “normal” instructor actions and activity
- Raises immediate “red flags” for lack of activity or abnormal grade distribution
- Ties instructor behaviors to the overall risk level of the students in that class
