

# Powering Up Your Canvas Course, Part 3

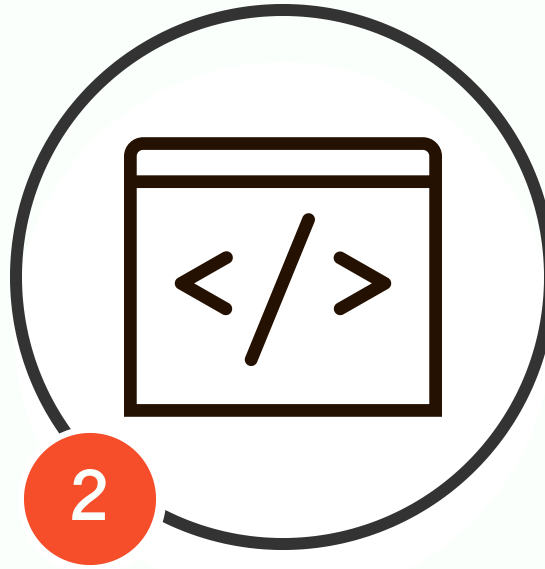

ADVANCED

## Use Ctrl+K

Links in your course open up within the Canvas instance. If you would like links to open in a new tab, click on the link and press CTRL+K. A new window opens. Click the drop-down arrow by "Target" and choose "New Window."

## Use HTML Code

If you have some basic knowledge of HTML coding, you can "spruce" up your course with some interesting features including buttons and other components. Canvas has a style guide you can reference. Just go to your canvas link and type `"/styleguide"` at the end.

## Use View Page History

You have the ability to view your page history in Canvas and reset it to an earlier version. This is similar to Version History in Google applications. When on a content page, click the three dots and choose "View Page History." Click the date you want to restore and then click "Restore this revision."
