

Powering Up Your Canvas Course, Part 3

Intermediate

Import ExamView Quizzes and Tests into Canvas

Your digital curriculum may come with ExamView files zipped and saved as QTI files. If you create tests in ExamView and would like to import them into Canvas, you can also export from ExamView as a WebCT file. Then, you can import either of the two file types into Canvas. You'll need to edit a little and change point totals, but saves you some work retyping.

Allow Students to Add Attachments to Discussions

By default, students cannot add attachments to their discussions. To enable students to do this, go to Discussions and click on the settings gear. Put a checkmark in the box next to "Attach files to discussions."

Use a File Upload Question in a Quiz

If you want your math students to show work and still use a Canvas quiz, use the File Upload Question option. Students can take a picture of their work and upload directly to that question.
